

Senior Design Project – Neural Machine Translator – Anurag Neti – Task List

1. Research on relevant domain areas necessary to complete project. These domains include:
 - Deep Learning
 - Sentiment Analysis
 - Supervised Learning
 - Various Python libraries such as numpy, and Keras.
2. Research every topic to sufficiently contribute to project.
3. Once research has completed, or while research is being done, begin design and implementing project.
4. Collaborate with team members and advisor to ensure project is being completed on schedule.
